Use of staples with Elephant Skin or Shield Right synthetic roofing underlayment:

Though staples are NOT recommended for installation of Elephant Skin or Shield Right synthetic roofing underlayment, they can be used provided there is **NO RAIN AND/OR HIGH WINDS IF AND ONLY IF the primary roof covering is installed WITHIN FIVE DAYS of underlayment installation.**

This allowance is applicable only in areas where local building code allows the use of staples for underlayment installation. In ALL areas, local building code requirements have primary rule over roofing installations.
